New Features

Hi team,

We recently held a webinar where we announced the **new features included in Compliance Onboard**. We hope you found it useful! In case you were not able to join us, there is a summary as well as link to the [supporting materials](#) so you can view the information in more detail.

Now our customers will have an **enhanced user experience**, with a **better access and display of information**, which will allow them to take **quicker decisions** and have **more efficient scanning processes**.

In addition, the platform will enable the following features:

Screening flag: you will be able to determine whether the investigated entity has any news or potential matches from the start of the process.

Carry out massive screenings: now you will be able to screen batches of up to 20 entities and simultaneous searches of 5 entities within the platform.

See expandable results: you will be able to analyze multiple results in a single page.

If you are part of the sales team, it is important that you review the changes in the commercial focus they have been implemented.

Would you like to know more about the new features and the changes in the commercial model?
